1) Write a program to find wheather a number is positive.
& not?

Ans: number = int (input ("enter a number")

       if number > 0;
        print ("the given number is positive")

      elsf number < 0;
        print (' the give number is negative')

      else:
        print (" the given number is 0")

      if number = = 0;
         print (" the given number is positive 0 ")

       else:
          print (" the given number is positive")

       else:
          print (" the given number is negative")

Output:

       enter a number   4
       the given number is positive

       enter a number -4
       the given number is negative

3)
```python
a = int( input ('enter value of a :'))
b = int (input ('enter value of b:'))

if a>b:
    print (a, "is greater value')

else :
    print (b, 'is greater value')
```

Output:

enter value of a : 11

enter value of b : 12

12 is greater value.

2
Ans:
```python
N = int (input ('enter age of person'))

if N>18:
    print (' person is eligible for voting')

else:
    print ( person not eligible for voting')
```

Output:

enter age of person 15

person not eligible for voting
